Strike quickly and hit the base directly

Ultra-pulse shock waves release the highest movement frequency in an ultra-short time ($20\mu\text{s}$) with extremely fast kinetic energy, allowing each superimposed energy to maximize the effectiveness and comfort of treatment.

Anti-wrinkle, firming, lifting

Layered management quickly improves the health of the skin and perfectly repairs skin blemishes, to achieve the effects of unblocking, dissolving, lifting, tightening, brightening, shaping, and beautifying the skin, allowing the skin to be in place in one step.

RF Sine Wave Technology

The 6.78MHz radio frequency penetrates the epidermis directly into the dermis with a sine wave output. Ultra-pulse shock wave technology generates high-energy focused ultrasound, rapidly penetrates the epidermis, fat layer, stimulates the membrane contraction of the SMAS layer, instantly makes the skin tissue reach 65°C, thus producing a thermal coagulation effect on the skin, forming a mesh coagulation point in the dermis and fascia layer,

EMS Microcurrent Pulse Technology

Unique targeted micro-current pulses stimulate ion channels on cell membranes. Medium frequency current technology tightens muscles and reduces skin gaps.

HIFU Ultrasound Technology

Focused ultrasound penetrates deep into the fascia layer. Endogenous heat lifting wave technology stimulates fiber and collagen tissue to contract and tighten, regenerate and repair, and achieve layer-by-layer lifting and tightening.

15RS multi-dimensional handle

Redefine HIFU, RF, and EMS anti-aging technologies, and let technology help you manage your appearance and body shape. The 15RS multi-dimensional handle changes the X and Y axes to quickly apply high-frequency energy to the face to tighten and lift it.

Matching probe model

Standard: 1.5mm 3.0mm 4.5mm 2.0mm
Optional: 6.0mm 9.0mm 13.0mm

Probe corresponding part

Eyes: 2.0mm
Face: 1.5mm 3.0mm 4.5mm
Body: 6.0mm 9.0mm 13.0mm

RF

The 6.78MHz radio frequency penetrates the epidermis directly to the dermis in the form of sinusoidal wave output, causing polar water molecules to generate heat (Joule heating) by high-speed friction, heating to about 45°C, causing collagen fibers to contract and activating the wound healing mechanism, stimulating the regeneration of collagen and elastic fibers, thereby tightening the skin and reducing wrinkles. By improving subcutaneous blood circulation and oxygen supply, enhancing the skin's metabolic capacity and improving the overall texture of the skin, it achieves the effects of tightening, lifting and delaying aging.

EMS

EMS unique targeted microcurrent pulses stimulate ion channels on the cell membrane, promote glucose and oxygen to enter the cell, and improve mitochondrial function through the "cell charging" mechanism. It stimulates the connection between actin and myosin, promotes isometric muscle contraction rather than dynamic contraction and skin muscle training, reduces the damage of chronic inflammation to cells, breaks the vicious cycle of "inflammatory aging", and achieves anti-aging effects through cell activation, collagen synthesis, muscle firming, anti-inflammatory and neuromodulation.

Point output

Line output

It can output in two directions quickly, making point, line and surface operations more user-friendly

New probe dual high-speed brushless motor high efficiency

HIFU

The latest patented ultra-pulse shock wave technology of V-HIFU and P-HIFU is used to generate high-energy focused ultrasound, which quickly passes through the epidermis. The membrane of the fat layer and SMAS layer contracts, instantly making the skin tissue reach a temperature of 65°C, thereby producing a thermal coagulation effect on the skin, forming a mesh coagulation point in the dermis and fascia layer, stimulating the contraction and firming of fibers and collagen, regeneration and repair, and achieving layer-by-layer lifting and firming.

36RS multi-dimensional handle

Redefine HIFU, RF, and EMS anti-aging technologies, and let technology help you manage your appearance and body shape.

36RS handle "micro pulse ultrasound" synergistic technology, ultrasonic linear dot matrix focusing can maximize the operation effect; In addition to lifting, it also brings an extra sense of firmness; multiple modes can effectively reduce pain compared to traditional ultrasonic modes.

Matching probe model

Standard: 1.5mm 3.0mm 4.5mm

Probe corresponding part

Epidermis: 1.5mm

Dermis: 3.0mm

Three new technologies

Wrinkle removal principle

Targeted tissue heating causes the subcutaneous collagen to shrink and tighten. The dermis is heated while the epidermis maintains normal temperature. At this time, two reactions will occur: First, the dermis becomes thicker, and wrinkles become lighter or disappear; Second, the subcutaneous collagen is reshaped and new collagen is produced, which becomes tighter after one treatment. After heating, the dermal collagen fibers shrink, tightening the loose skin wrinkles, while rearranging the collagen proliferation and repairing the aging and damaged collagen layer, thus achieving the effect of wrinkle removal and skin tightening.

18RS multi-dimensional handle

The subversive combination of HIFU, RF and EMS uses intelligence to make the anti-aging and body shaping effects more significant.

Dual high-speed brushless motors operate efficiently, and the focused ultrasound combined with 6.78MHz radio frequency transmits energy from the epidermis to the fat layer synchronously, burning fat quickly.

RF / EMS

Matching probe model

Standard: 8.0mm 13.0mm

Optional: 6.0mm 10.0mm 16.0mm 18.0mm

Spiral RF wave technology output

HIFU focused ultrasound penetrates deep into the fascia layer, RF radio frequency activates collagen in the dermis, and EMS microcurrent targets the muscle layer. Using the latest spiral radio frequency wave technology, 6.78MHz spiral sine wave radio frequency technology transmits its radio frequency energy from the epidermis to the fat layer in a positive and negative spiral.

Thermal solidification point of MFUS

The basic principle of shock wave fat reduction

The hollow beam sound wave technology is adopted. Countless high-intensity heat energy is beamed and transferred in a dot matrix. High-energy matrix molecular energy waves vibrating up to millions of times per second are emitted through 4MHz and 2MHz. They penetrate deep into the subcutaneous tissue, and all the energy converges to form a beam point. The depth of 6-13mm is repaired, and the skin tissue is strongly impacted, producing an electric field gathering effect on the skin tissue. The channels for the skin to absorb nutrients and excrete toxins are opened, and the barrier between the epidermis and the fat layer is emptied, so that the fat is quickly metabolized and absorbed, promoting metabolism, and achieving the effect of skin firming, slimming and shaping.

no downtime

Probe multiple care modes

According to age groups, skin conditions, and customer needs, points, lines, and surfaces can be combined to achieve a full-layer, all-round anti-aging customized solution.

Single-mode care

MP mode (multi-point line) [417 points/1 shot] You can also use the dot mode [17 points/1 shot] You can freely change the mode by touching the interface on the same probe

Micro-pulse treatment

Basic treatment efficacy, add new operation scheme, consolidate the effect and expand the scope of application. Circular MP mode, circular dot mode can be selected, the same probe touch interface can change the mode freely.

AI spiral care

Focused ultrasound combined with 6.78MHz radio frequency will penetrate the energy from the epidermis to the fat layer synchronously, burning fat quickly. The output energy effect area reaches 40MM*50MM, which can instantly eliminate fat in a large area on a large scale.

Multimodal care

Micro-pulses achieve the superposition of tiny and precise thermal coagulation points, acting evenly and densely on all areas of the target layer, and densely dispersed energy has a relatively wider effect, highlighting the overall advantage.

Precautions before operation

1. People with severe heart disease, pacemakers, any metal implants, severe hypertension, diabetes, epilepsy, pregnant women, etc. are prohibited from using this device.
2. Areas with artificial fillers in the body, such as silicone, are prohibited from using this device.
3. After major surgery, it is prohibited to operate the surgical site before recovery.
4. It is not recommended to use this device when the skin is allergic or for severe facial acne. Wait until the skin recovers before using it.
5. If you have wounds on your skin, avoid the wounds or do not use this device.

Post-operation precautions

1. After the operation, do not wash your face with hot water within a week. It is best to use cold water. In winter, you can use warm water (no more than 35 degrees).
2. Apply a moisturizing and repairing mask once a day in the morning and evening within a week, and pay attention to moisturizing, hydrating and sun protection.
3. It is forbidden to operate other instruments on the face within a week (such as radio frequency, micro-electric, ultrasound, etc.). The specific time is determined according to the skin condition.
4. Do not steam sauna, do not do facial massage, do not wear heavy makeup, do not be in a high temperature environment, and do not expose to the sun within a week.
5. Do not accept injections, embedding, filling and other behaviors within a week, and do not do color light and laser beauty equipment care within a month.
6. Do not eat foods with heavy pigments such as soy sauce within a week, do not drink, smoke, eat peppers, seafood, and blood-activating foods, do not eat hard foods such as sugarcane and betel nuts, and do not take antibiotics such as aspirin and anti-inflammatory drugs.
7. Try to drink less water after 8 pm, because everyone's physique and metabolism are different. If edema occurs, it is normal and the symptoms will subside naturally.
8. Pay attention to rest after care, ensure adequate sleep, and avoid strenuous exercise.
9. If you have received fillers, injections, freckle removal projects before or your metabolism is not good, it is normal to have redness, swelling, rashes and blackening in a short period of time. It will subside on its own in 3-7 days, and some people will last for about a week.
10. After the operation, you need to do a good job of repair, as well as supplement nutrition and water to avoid unsatisfactory results and short duration due to neglect of care and repair.
11. Please consciously abide by the above regulations, which will play a decisive role in the presentation of the later effects.
